

ESD Waste²Water, Inc.
Partnership for a Cleaner Tomorrow

Providing Solutions

ESD Waste2Water, is recognized as the worldwide leaders in industrial wastewater and environmental remediation. Our company provides solutions to wastewater and environmental issues for:

- golf and turf industries
- equipment rental yards
- municipal, industrial and rental fleets
- oil and gas industries
- heavy equipment
- aggregates
- trucking
- agricultural equipment
- food processing
- groundwater and soil remediation

ESD Waste2Water designs, manufactures, installs and services environmental protection systems for clients across the United States, Canada and Europe. ESD Waste2Water leads the industry with cutting-edge technology backed by superior customer service.

History

The dynamic growth of ESD Waste2Water is a testament to the superiority of the company's products and the satisfaction of our clients worldwide. The company was founded in 1993 as Environmental System Design, an environmental engineering consulting firm led by Jon E. Houchens. Through working with clients on a wide range of environmental clean-up issues, an urgent need was quickly recognized for a new, revolutionary system that could provide complete and total wastewater solutions.

Thus, the Waste2Water system was born, starting in a rented 3,000 sq. ft. manufacturing facility, growing over the years to 6,000, then 14,000, then 40,000, and finally culminating with a brand new, state-of-the-art 72,000 sq. ft. manufacturing headquarters. Along the way, the company acquired Nepcco Systems, experts for two decades in environmental remediation, thus creating the "Partnership for a Cleaner Tomorrow."

The Industry Experts

Our team of professionals include consultants, problem solvers and industry experts. We stay focused on providing you solutions to your regulatory, liability, and other environmental issues. Recognizing their expertise, our product managers are frequently asked to be guest speakers at association meetings, seminars and conferences.

ESD Waste2Water currently employs more than 50 professional engineers, electrical engineers, professional geologists, product managers, wastewater specialists, QA/QC and customer support managers, production specialists, and sales and customer service experts.

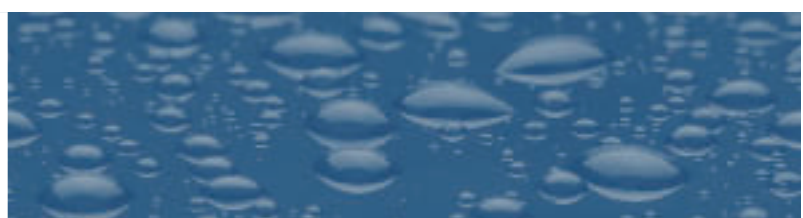

Wash Water

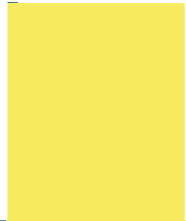

ESD Waste2Water offers an exclusive line of fixed-film, biological wash water treatment and recycling systems that are compact, completely automated, and provide virtually maintenance-free operation. The treatment process produces "vehicle wash water quality" effluent, allowing the recycled water to be re-used again and again. To further minimize cost and disruption of facility operations, ESD's wash water equipment can often be integrated into existing floor collection systems, piping and other process applications.

Unique Patented Process

The revolutionary environmental system designed by ESD Waste2Water was recognized and awarded an exclusive patent by the United States Patent Office. This proprietary process employs a microbial blend which is specifically designed for both pollution prevention and water conservation. This system is available exclusively through ESD Waste2Water, providing you with the leading-edge technology required to address the environmental concerns of today and tomorrow.

Remediation

When a large-scale solvent spill occurs or a leaking storage tank is discovered, ESD Waste2Water is the company that environmental consultants rely upon most. ESD is the industry's leader in providing ground water and soil remediation technology, with literally thousands of equipment installations throughout the United States; and customer support is second-to-none. Every service technician is OSHA trained and certified, and is just as knowledgeable about your system as the factory professionals who

designed and built it. ESD Waste2Water remediation systems can be custom manufactured for any specific application – no other company can offer as broad a range of products and services.

The ESD Advantage

ESD Waste2Water offers direct, customized solutions tailored to your specific needs. There are no dealers, distributors or middlemen. Our sales professionals work directly for the manufacturer, offering design expertise in the field that is unparalleled. We design the entire system, manufacture it, install and then service it. Maintenance issues are kept well below industry minimums, because they are “designed out” before they are assembled. In the rare event a system requires service, factory representatives work on the same system they helped to build initially. This is the ESD Advantage.

Products

ESD Waste2Water products and systems feature superior design and manufacturing that results in greater efficiency and performance, and reduces operation and maintenance costs and resources. The materials used in the fabrication process consist of the absolute highest quality, ensuring the longest shelf life found in the industry today. Some of our systems and products include:

- fixed-film bio-remediation
- oil/water separators
- air strippers
- air/water separators
- liquid & vapor phase carbon vessels
- bio-carbon remediation
- vapor extraction
- air/bio-sparging
- dual phase extraction
- chemical storage
- chemical mix/load
- and many others

From Start to Finish

ESD Waste2Water manufactures and delivers complete, turnkey wastewater and remediation solutions from start to finish; including custom-design requirements, to the manufacturing and installation process, as well as project financing options, if desired. But our commitment to you doesn't end there. Our focus on customer service is unequalled in the industry, to which our many repeat clients will attest.
