

## Portable Equipment Wash Stations

**ESD Waste<sup>2</sup>Water, Inc.** offers customized self-contained Equipment Wash Stations (EWS series) to meet your requirements for washing small equipment and parts. Two standard wash area dimensions afford a range of operating needs to handle multitude of small equipment and part sizes, dimensions and geometries. Manual spraying with a pressure washer focuses the cleaning operation where needed for effective and thorough washing. Walls on 3 sides of the wash station help contain overspray.

A deck capacity of 4,500 lbs. provides plenty of structural integrity. The integrated biological treatment system recycles the wash water for reuse, saving water and detergent costs. In addition, the wash station complies with environmental regulations. A built-in trough captures and settles out mud and debris from the washing operation. The removable grating over the trough provides easy access for removal and disposal of solids.

Couple the system with your own hot or cold water pressure washer for maximum washing efficiency, or use the optional integrated 1,000 psi, 2.2 gpm cold water pressure washer.

The above ground wash station is easy to set up and maintain. Plus, it's portable by design...and can be relocated easily with a forklift. The EWS series can also be customized to fit the specific needs of your application. Please contact us for a complimentary review of your washing requirements.

Certified to UL-508A Standards

Thank you for allowing ESD to provide a solution to your equipment needs.
