

In-Ground Sumps

ESD Waste²Water, Inc. designs and manufactures a full line of in-ground sumps for a variety of containment and water treatment applications. Most of our sumps are constructed of marine grade aluminum for effective chemical resistance, strength and durability. The sumps will typically contain welded NPT fittings for inlet, outlet and electrical connections for ease of installation and for maximum leak protection. We are commonly asked to provide such options as:

- * Custom Grating for specific load requirements
- * Coalescing media for oil removal
- * Dual wall construction of sumps for maximum containment
- * Interstitial monitoring features
- * Specific dimensions to meet particular location or application requirements

If we don't have a sump that is right for your application, we will help design and build one that is.

Certified to UL-508A Standards

Thank you for allowing ESD to provide a solution to
your equipment needs.
