

Production Capabilities

ESD Waste2Water specializes in helping customers develop Remediation Systems that are effective and environmentally friendly. Our line of remediation equipment sets the standard for the entire industry. Our package treatment systems are mounted on marine grade aluminum skids, or inside trailers or building enclosures. ESD's products can be custom tailored to individual specifications to meet the rigid requirements of your process needs. ESD's in-house design, engineering, fabrication, construction and technical support team will work with you to provide cost-effective and environmentally sound solutions. Our professional staff is committed to providing the highest quality, most reliable and technologically sound equipment, on schedule and within budget, supported by unparalleled customer service.

Corporate Headquarters - Ocala, FL
180,000 sq. ft. Manufacturing Facility

Providing Environmental Solutions

Located in Central Florida, ESD Waste2Water, Inc. is a worldwide leader in industrial wastewater treatment and environmental remediation. We design, manufacture, install and service environmental protection systems for clients across the United States, Canada, Europe, South America and Australia. ESD Waste2Water leads the industry with cutting-edge technology and clever, low-maintenance designs, backed by superior customer service.

Our water jet using 50,000 psi can accurately cut steel up to 8 inches thick

Production Capability

With corporate headquarters housed in its 180,000 square ft. manufacturing facility in Ocala, Florida, USA, ESD has the expertise and production capability to produce equipment for your environmental

We have a complete metal fabrication area with brake presses, metal shearing equipment and a high-precision, computer-controlled water jet metal cutting system.

Remediation system in custom enclosure being assembled

Assembly

The massive assembly area can accommodate final assembly of large water treatment components and systems, trailer packages and remediation buildings. The testing area and our quality control department ensure items leaving the factory are fully-tested and meet rigid specifications.

Custom Equipment Enclosures

ESD's Custom Equipment Enclosures are used to mount and enclose remediation equipment. They are very durable and good choice for the long-term housing of your remediation equipment.

Fully-Integrated Remediation Systems

Low-Profile Air Stripper

Portable Dewatering Trailer

Product lines include:

- Air Sparging/Bio-Sparging
- Soil Vapor Extraction
- Sparge-Vent Systems
- Dual-Phase Extraction Systems
- Low Profile Air-Strippers
- Oil/Water Separators
- Liquid and Vapor Phase Carbon Absorption Systems
- Thermal/Catalytic Oxidizers
- Heavy Metal Treatment Processes
- The latest in Bioremediation Technology

Installation and Service

With a talented service team that is second to none, ESD can install and service your environmental system to maximize system operation and performance.
