- Oil & Gas
- Mining
- Solid Waste
- Automotive Salvage
- Decontamination
- Aerospace
- Aircraft
- Machine Tool
- Steel Mills
- Petrochemical
- Engine Rebuild
- Forklift & Warehouse
- Fleet & Rental
- Construction

**Containment Island Modules** by ESD can be assembled together to create a multitude of wash pad configurations - easily and economically. By using the 8'x12', 8'x16' or 8'x20' modules, you can create a wash pad to meet your size and load capacity requirements.

Optional Accessories like walls and ramps allow easy customization to your specific operations. The addition of an add-on biological wash water recycle system, transforms your new contained wash area into a closed loop system that can be used with pressure washers or High Volume Wash Systems.

The above ground pad design is easy to setup and maintain. It captures and controls your wastewater and avoids soil and groundwater contamination.

Plus, it is portable by design so it can be easily relocated. ESD offers expert design and configuration assistance - contact us to discuss your application.

### Specifications:

Model	LT812	LT816	LT820
Wash Pad Modules	8'x13'-2"	8'x17'-2"	8'x21'-2"
Load Capacity	25,000 lbs. per pad		
Material of Construction	Copolymer		
Options	4' High Walls Ramps 5' wide x 4' long		Ramps 4' wide x 4' long Ramps 4' wide x 8' long
